ECONOMIC PROSPERITY AND CHALLENGES FOR EUROPE

Dominique Barjot

Professeur d'Histoire économique contemporaine

dominique.barjot@paris-sorbonne.fr

barjot.dominique@orange.fr

Introduction (1)

The origins of the European Union:

1 - A first experience: the Carolingian Empire (7th-9th centuries A.D.)
1.1 The Roman Empire:

A/ achieved unity in the Mediterranean world

B/ collapsed in the West under the blows of barbarian invaders (Visigoths, Ostrogoths, Franks, Burgundians, Vandals, Huns, etc.)

C/ retreated to the Eastern Mediterranean Sea (Byzantine Empire, 5th-15th centuries), Orthodox religion

1.2 The Franks conquered the West:

A/ with the Empire of Charlemagne (768-814), crowned in Rome in 800 and established at Aix-la-Chapelle

B/ On his death, the Empire rapidly weakened, hence the division of 843 (Treaty of Verdun) = an Europe divided into three parts:

1 – France

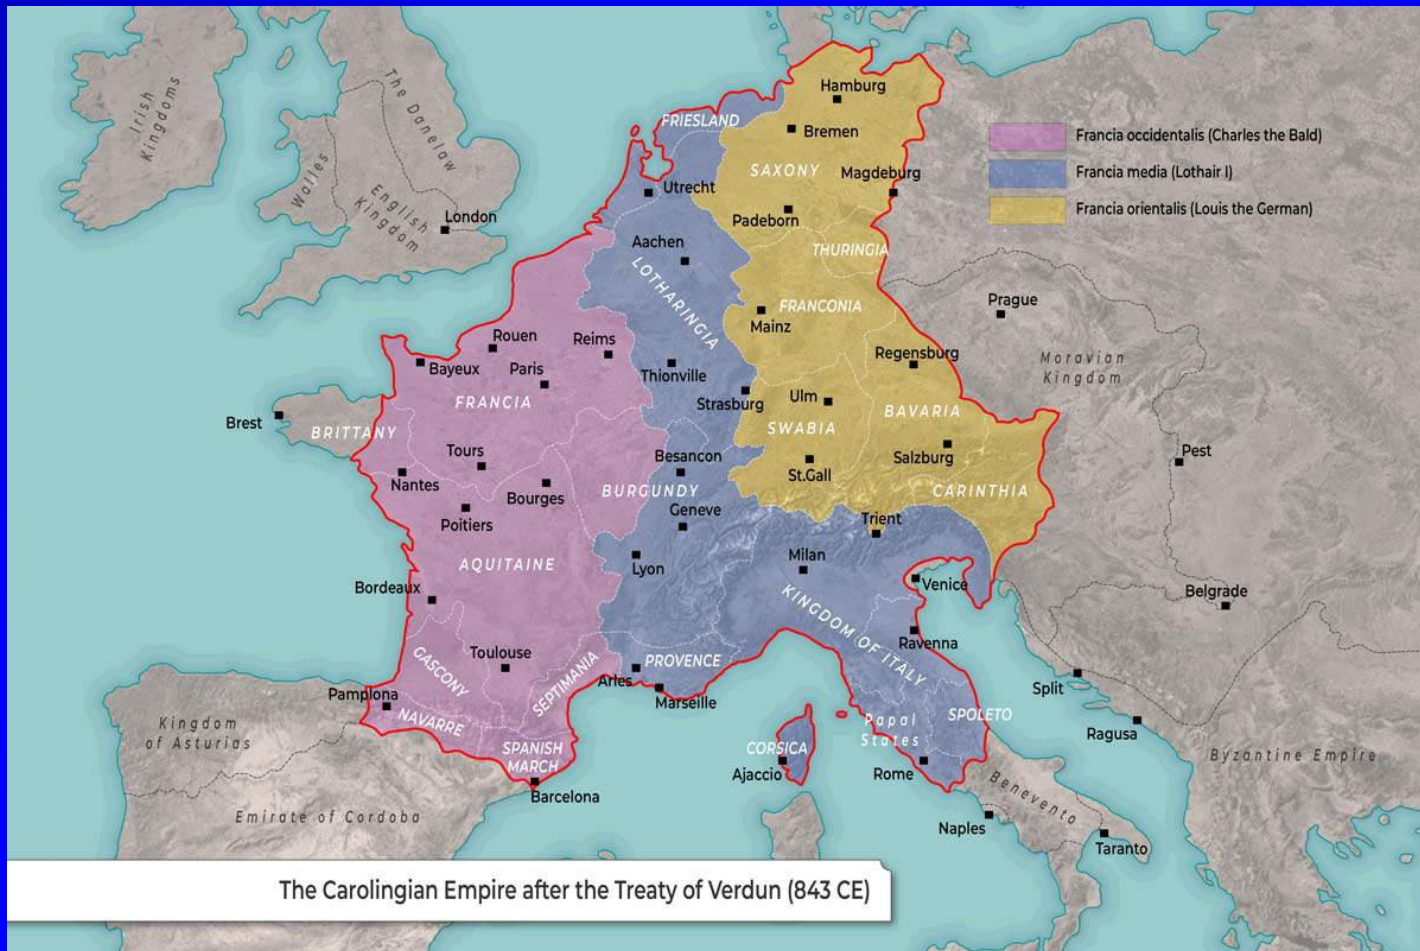

2 - Lotharingia (Netherlands, Belgium, Alsace-Lorraine, left bank of the Rhine, Switzerland, Lorraine, Burgundy, Piedmont, Lombardy, central Italy)

3 - Germania

Map of Charlemagne's Empire

Carolingian Empire after the Treaty of Verdun (843 CE)

Introduction (2)

2 - A long aspiration:

2.1 - A religious unity

- A/ around the Catholic religion and the Pope (medieval Christendom) B/ But challenged by :
 - 1 - the affirmation of the State (wars between France, England, the Holy German Empire, Spain, the Netherlands, Austria, Russia etc.)
 - 2 - the religious Reformation (Anglicans, Lutherans, Calvinists and other Protestants)

B/ Hope for thinkers (Immanuel Kant, Victor Hugo)

2.2 - An aspiration strengthened by the First World War:

- A/ The League of Nations
- B/ Franco-German rapprochement (Briand, and Stresemann, Loucheur and Rathenau)
- C/ Business interest (cartels, PanEuropa Committee, E. Mayrisch)
- D/ Nazi totalitarianism: the New German Order

Introduction (3)

3 - Building Europe:

3.1 - US world leadership:

A - The UNO, multilateral institutions (IMF, World Bank, FAO, UNESCO) and the primacy of the dollar

B - The Marshall Plan (1947-1953) the OECE (1948-1961) and OECD (1961-Today)

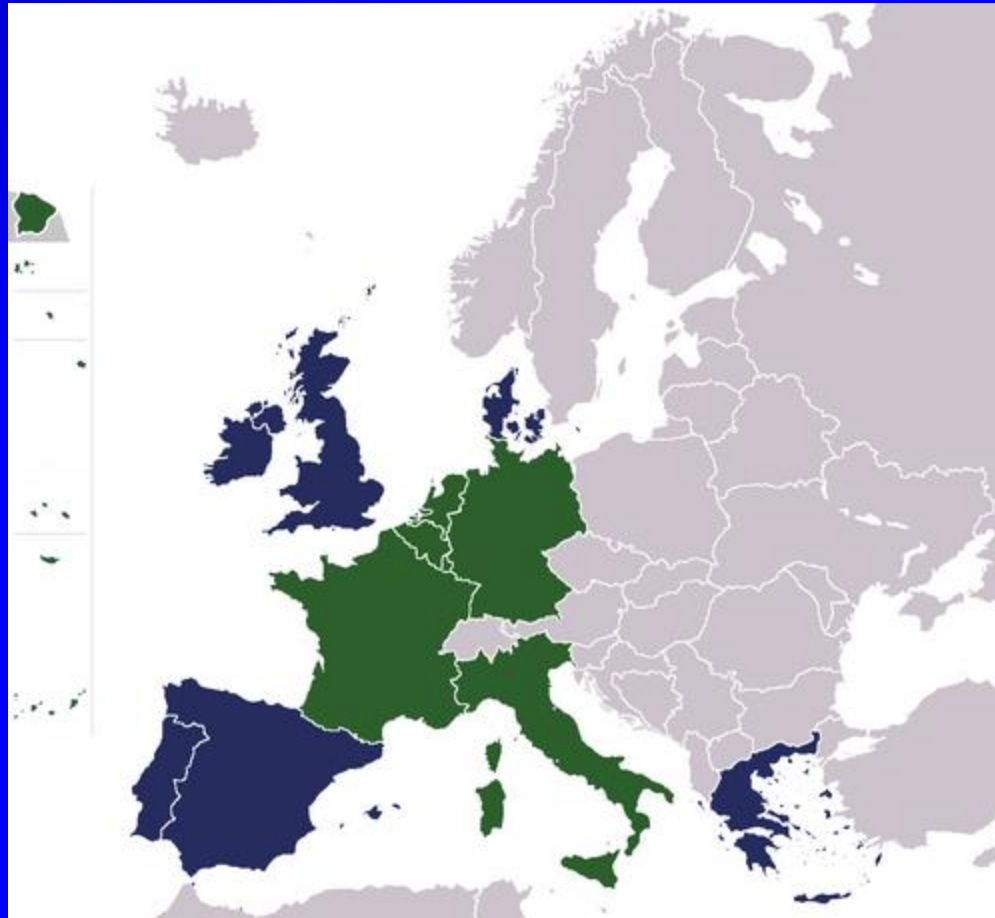

C - The EDC (1952)

D- NATO (1949) and SEATO (1954)

3.2 - The European Economic Community (1958)

3.3 - The European Free Trade Association (1960)

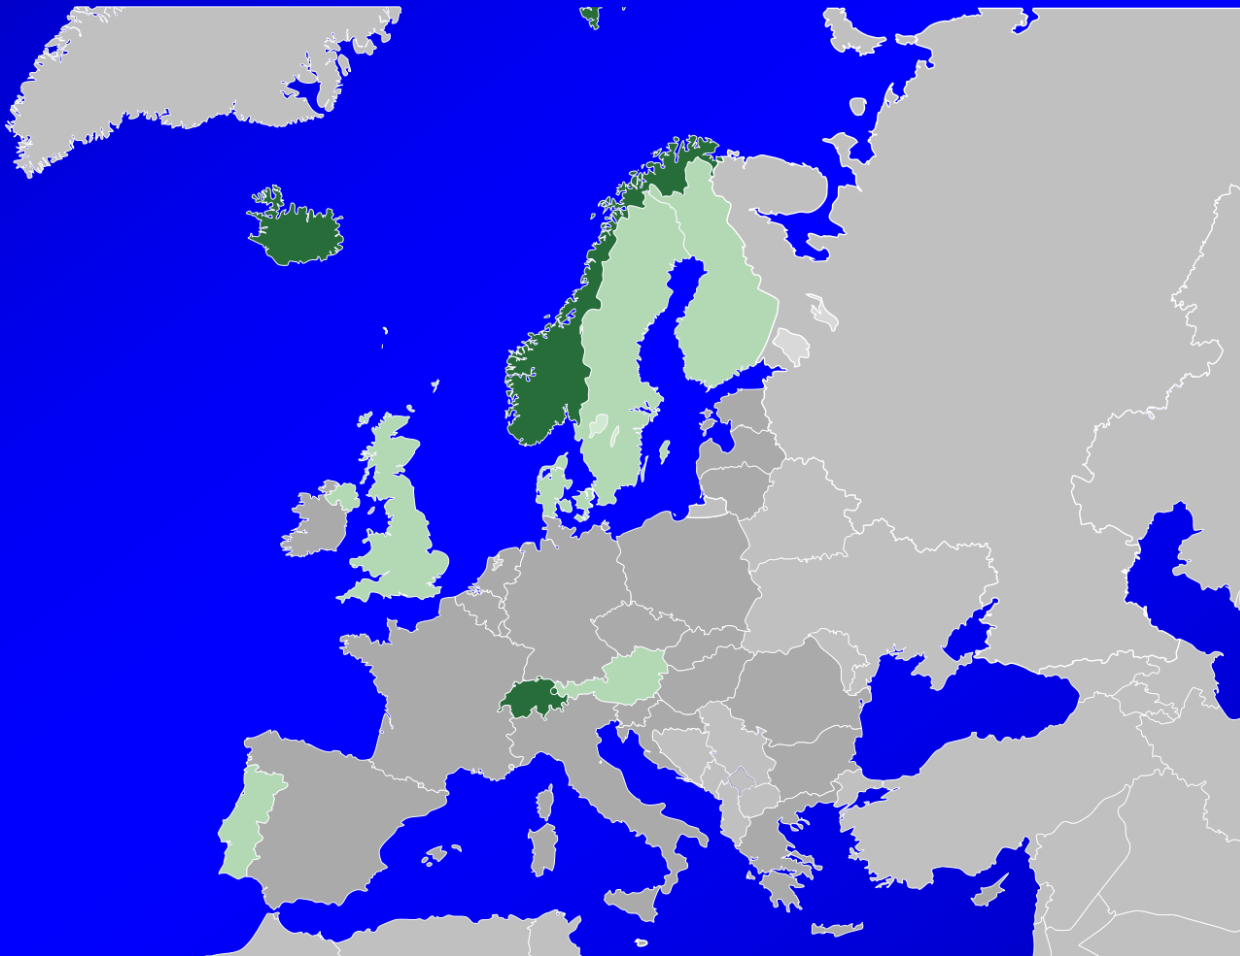

European Economic Community (1958)

1/ THE EUROPEAN UNION: DECISION-MAKING PROCESSES AND COMMON POLICIES

1.1/ A complex decision-making structure

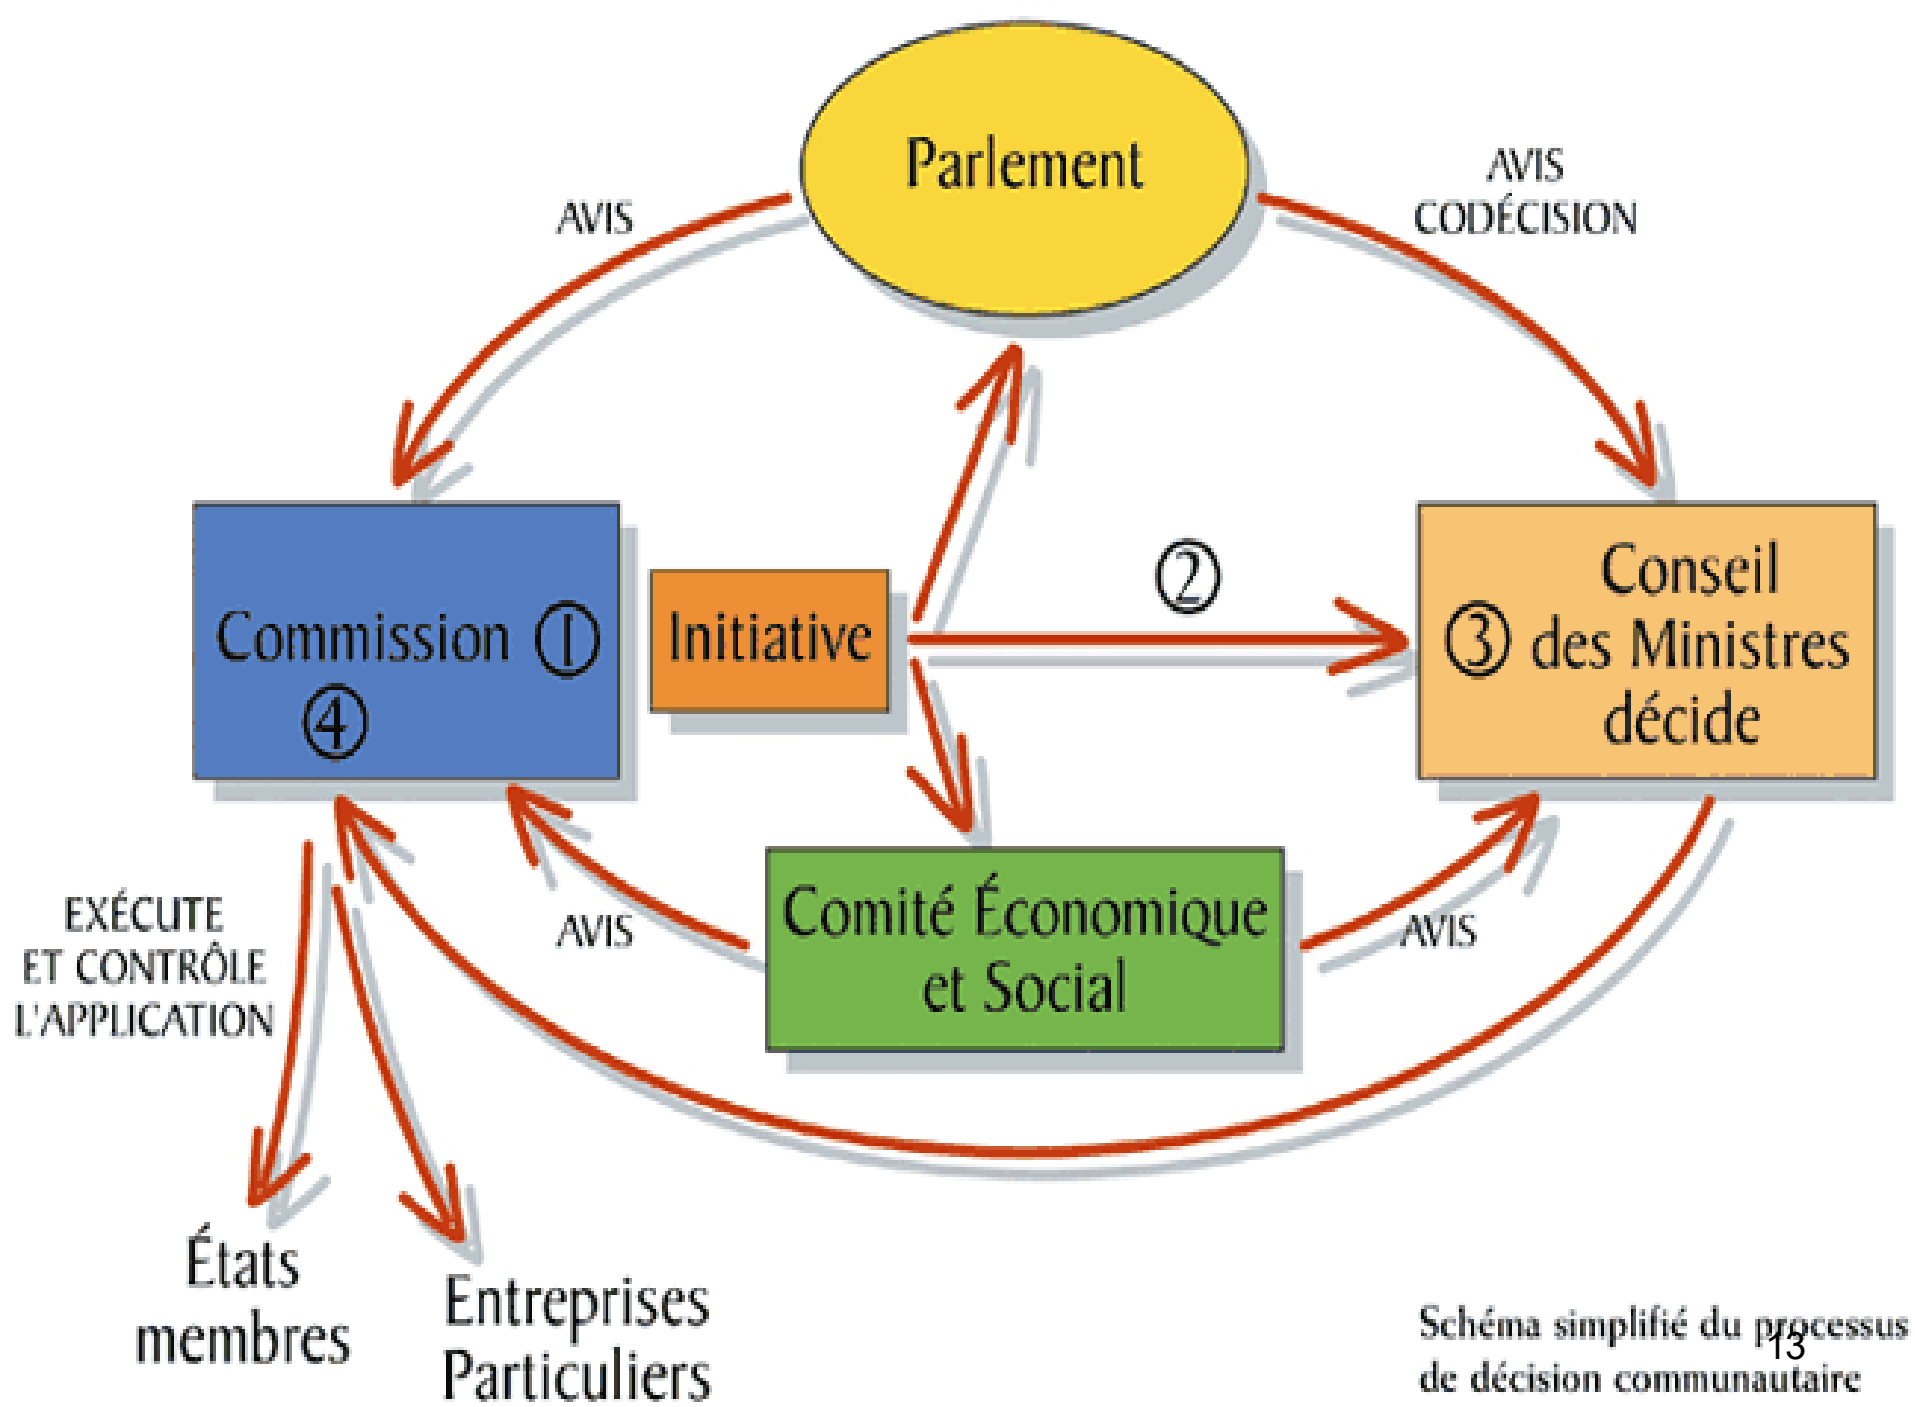

1.2/ A set of common policies:

A/ Common agricultural policy

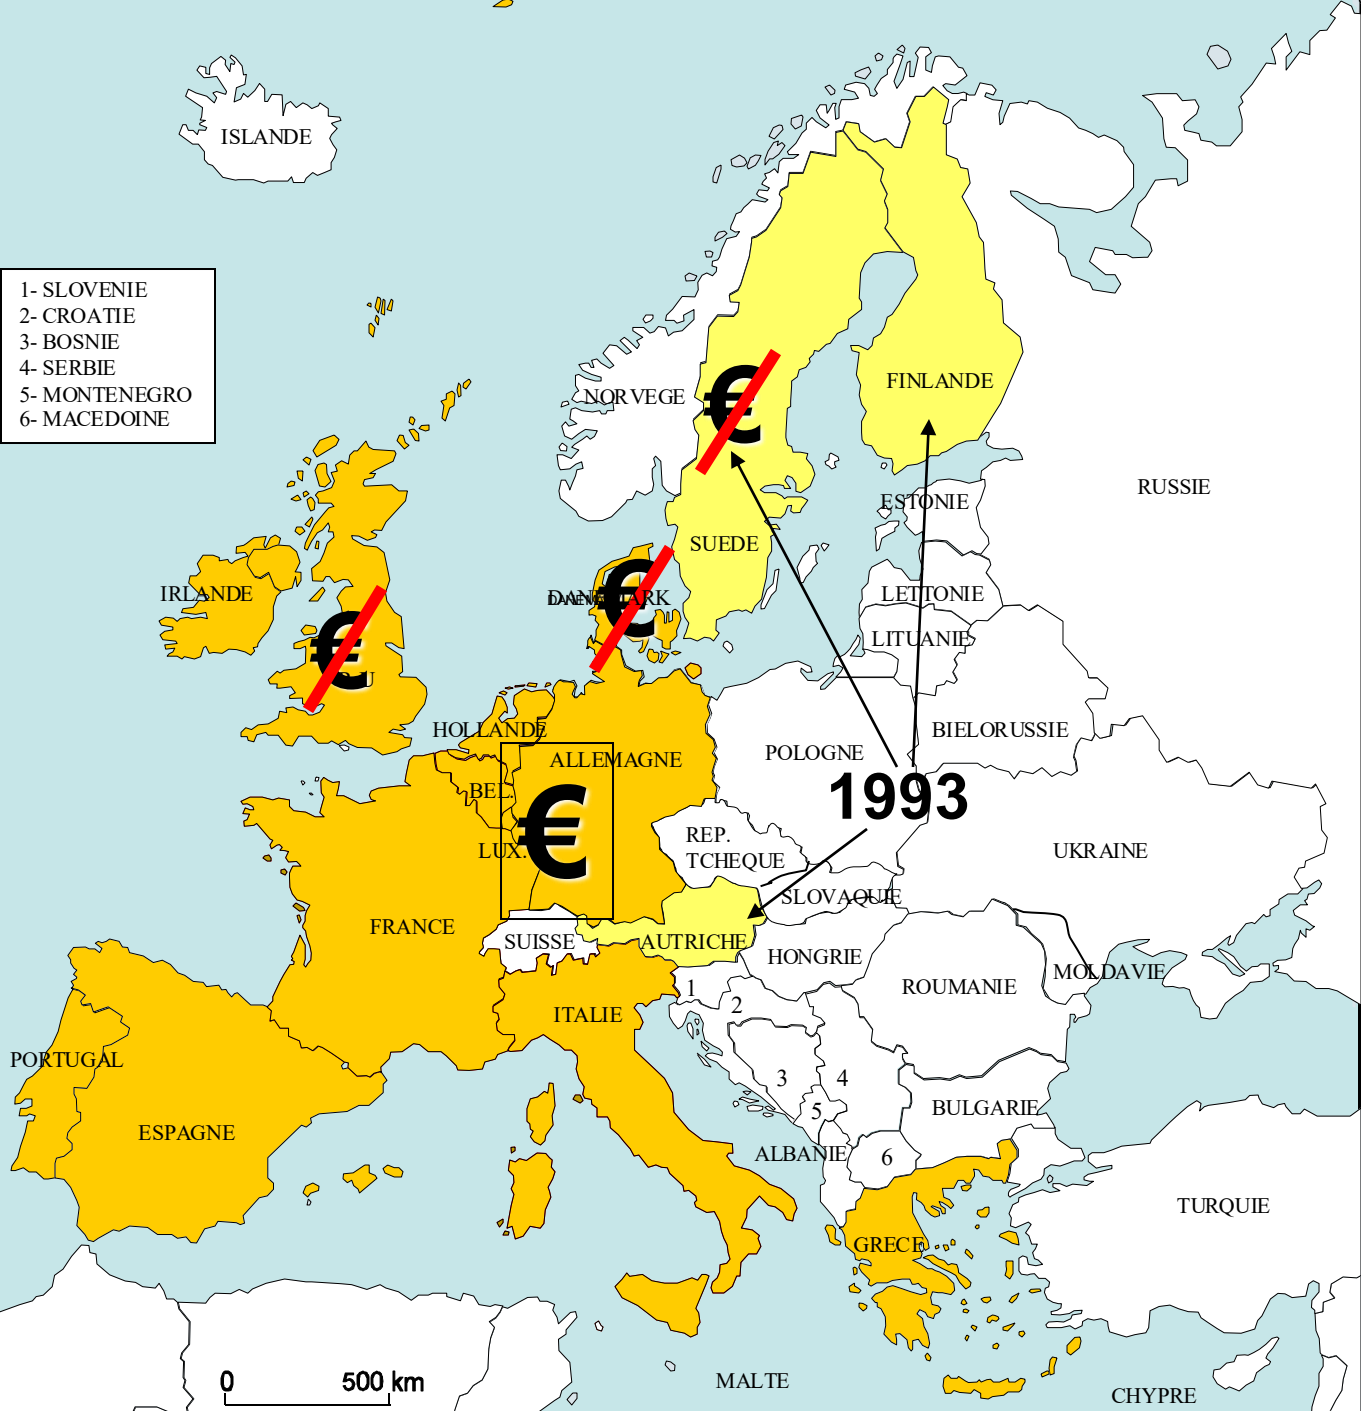

B/ Regional policy

C/ Common monetary policy

D/ Other Community policies

- 1- SLOVENIE
- 2- CROATIE
- 3- BOSNIE
- 4- SERBIE
- 5- MONTENEGRO
- 6- MACEDOINE

**Single Act
1986**

**Maastricht
1991**

EU 1993

**Schengen
1999**

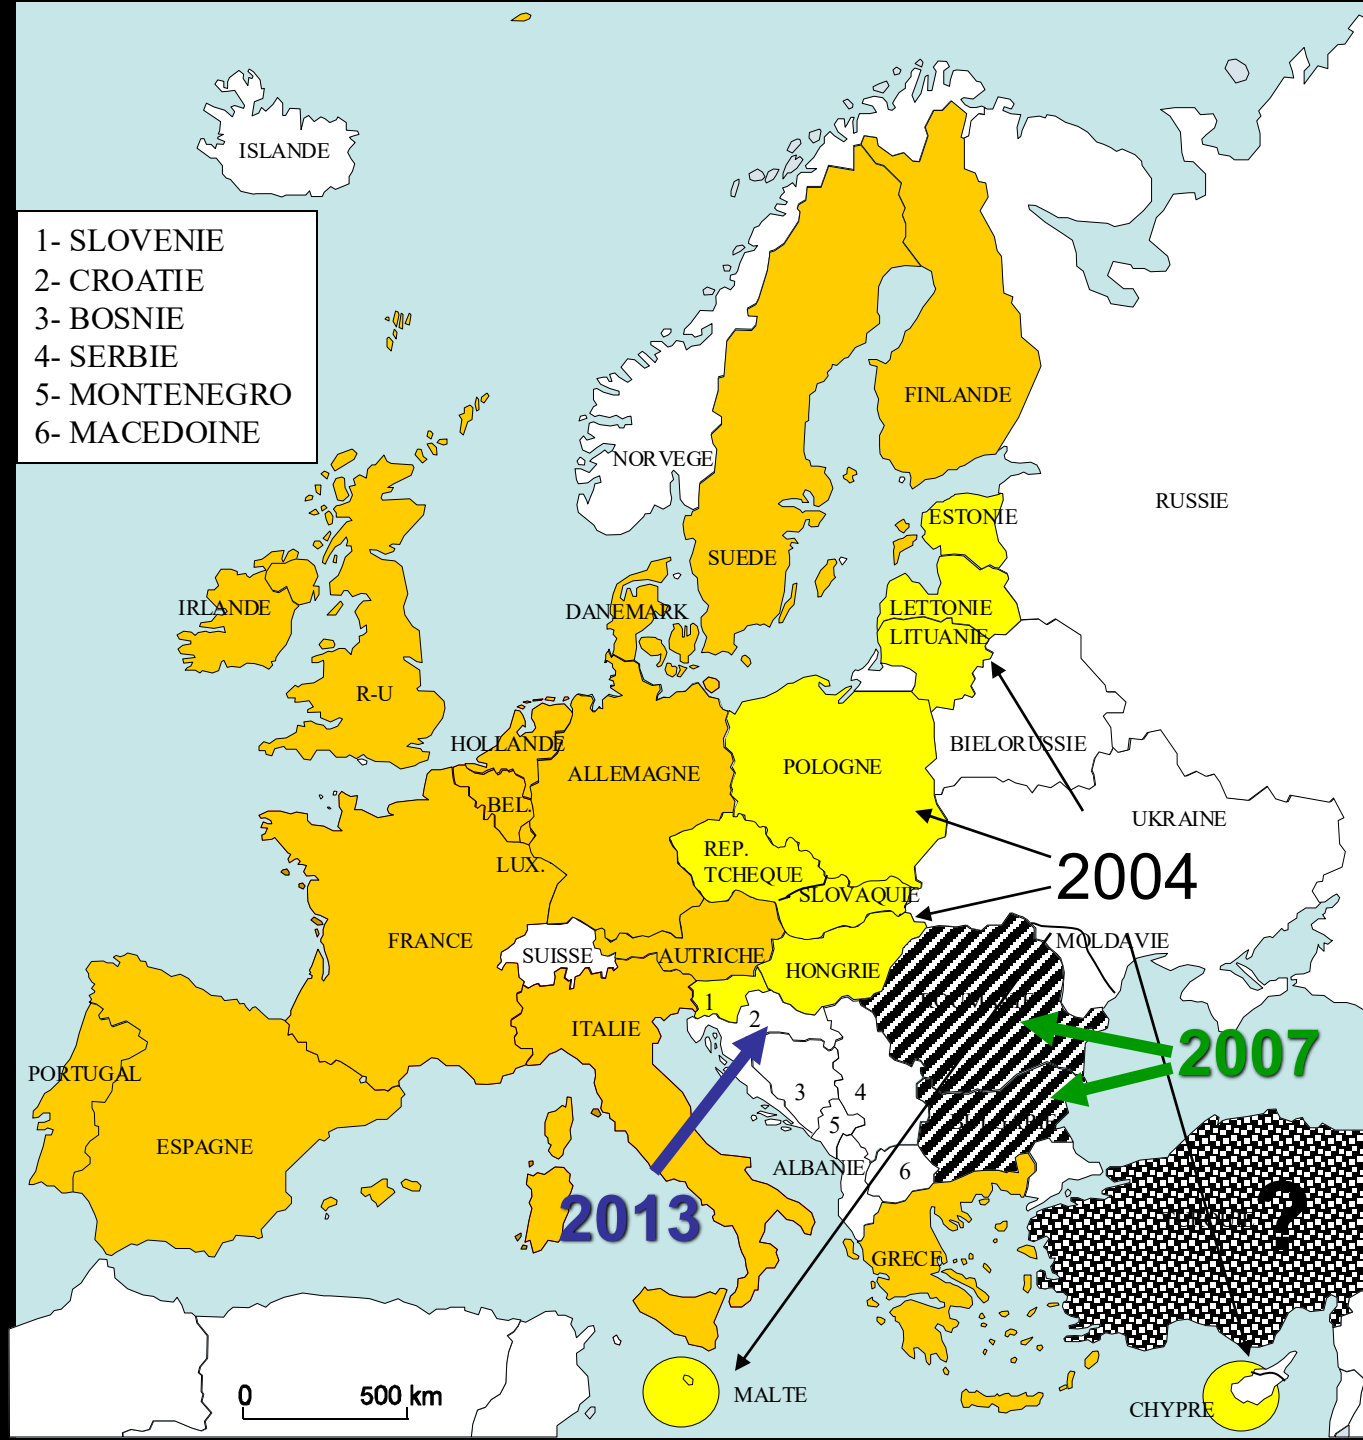

**EURO
2002**

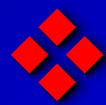

The enlargements of the EEC

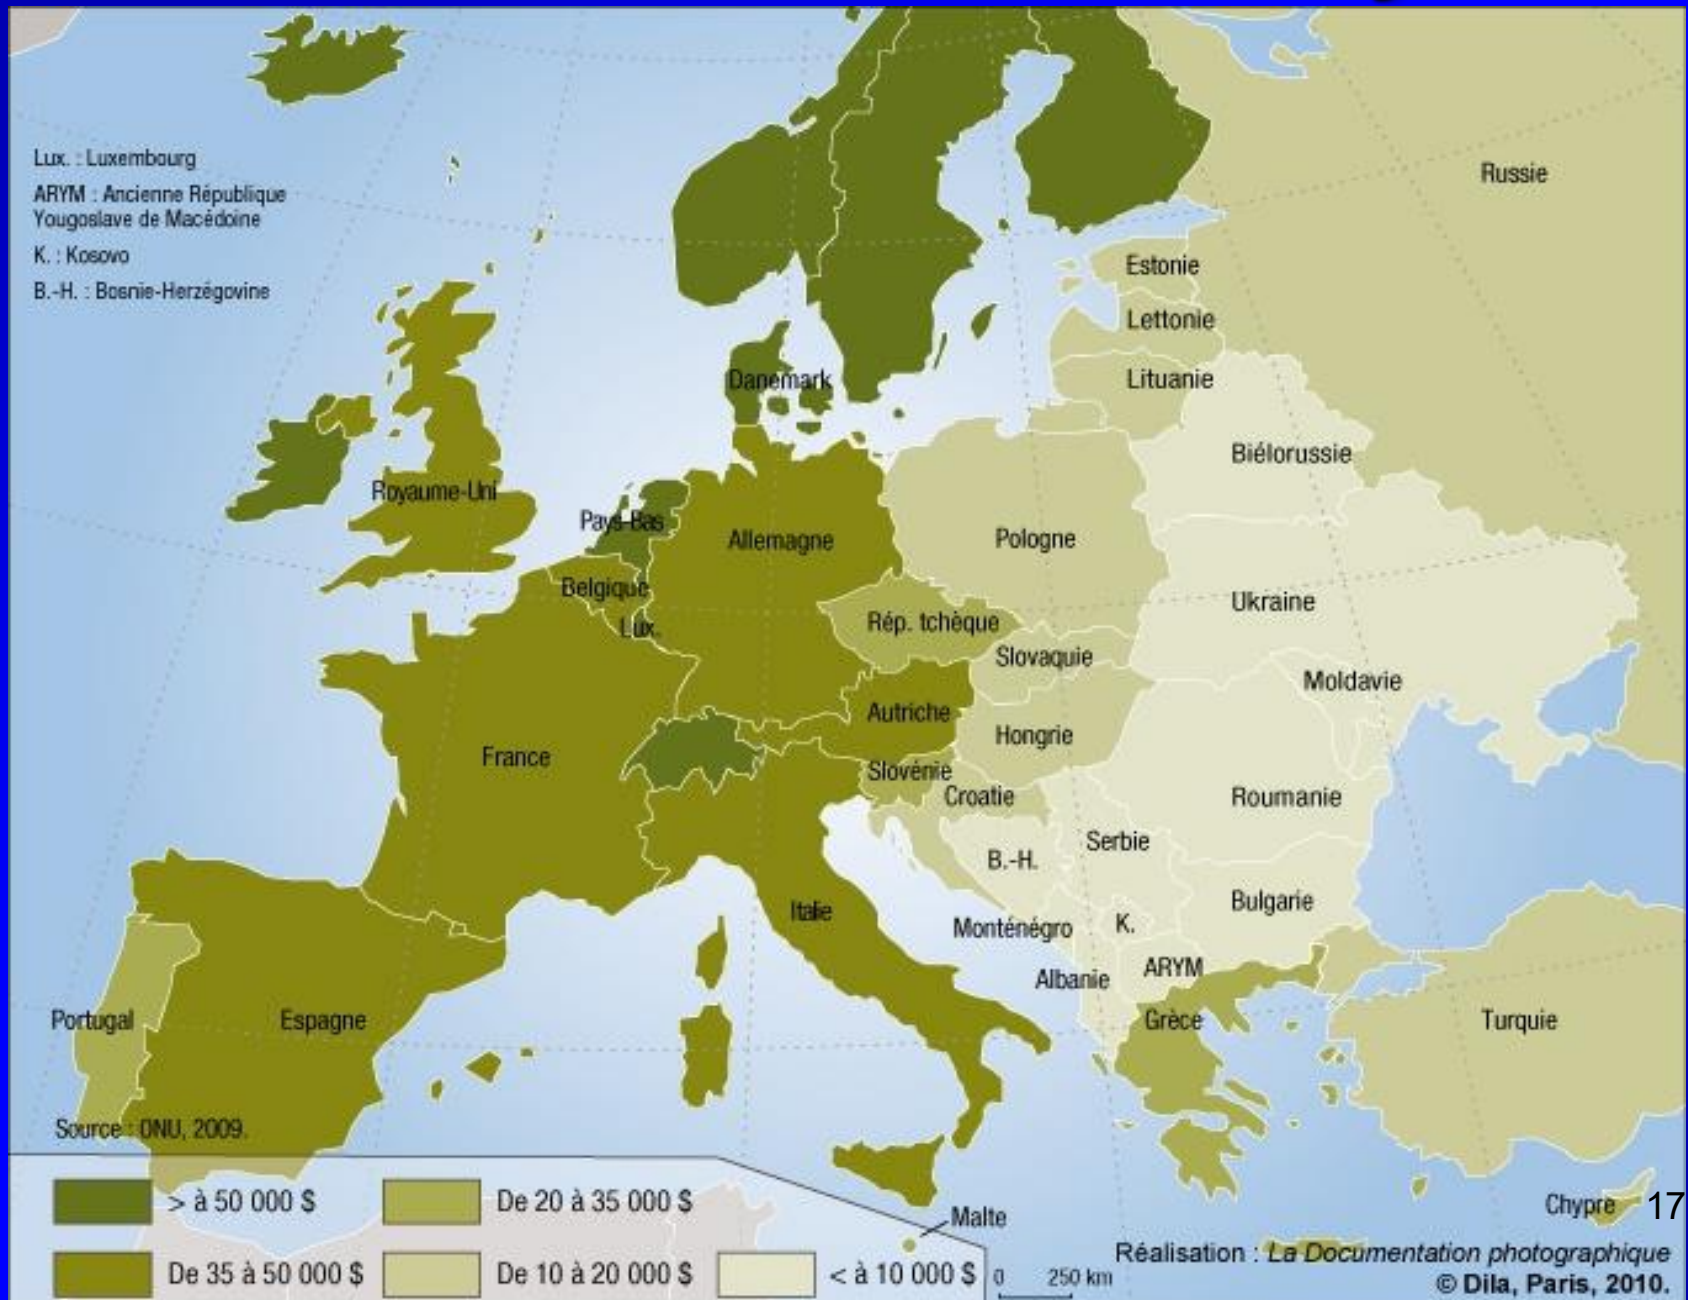

The EU's enlargements

The Common Regional Policy

2/ THE EUROPEAN UNION: GROWING PROBLEMS

A/ Cyclical: the Euro crisis

B/ Structural:

1 - demographic decline

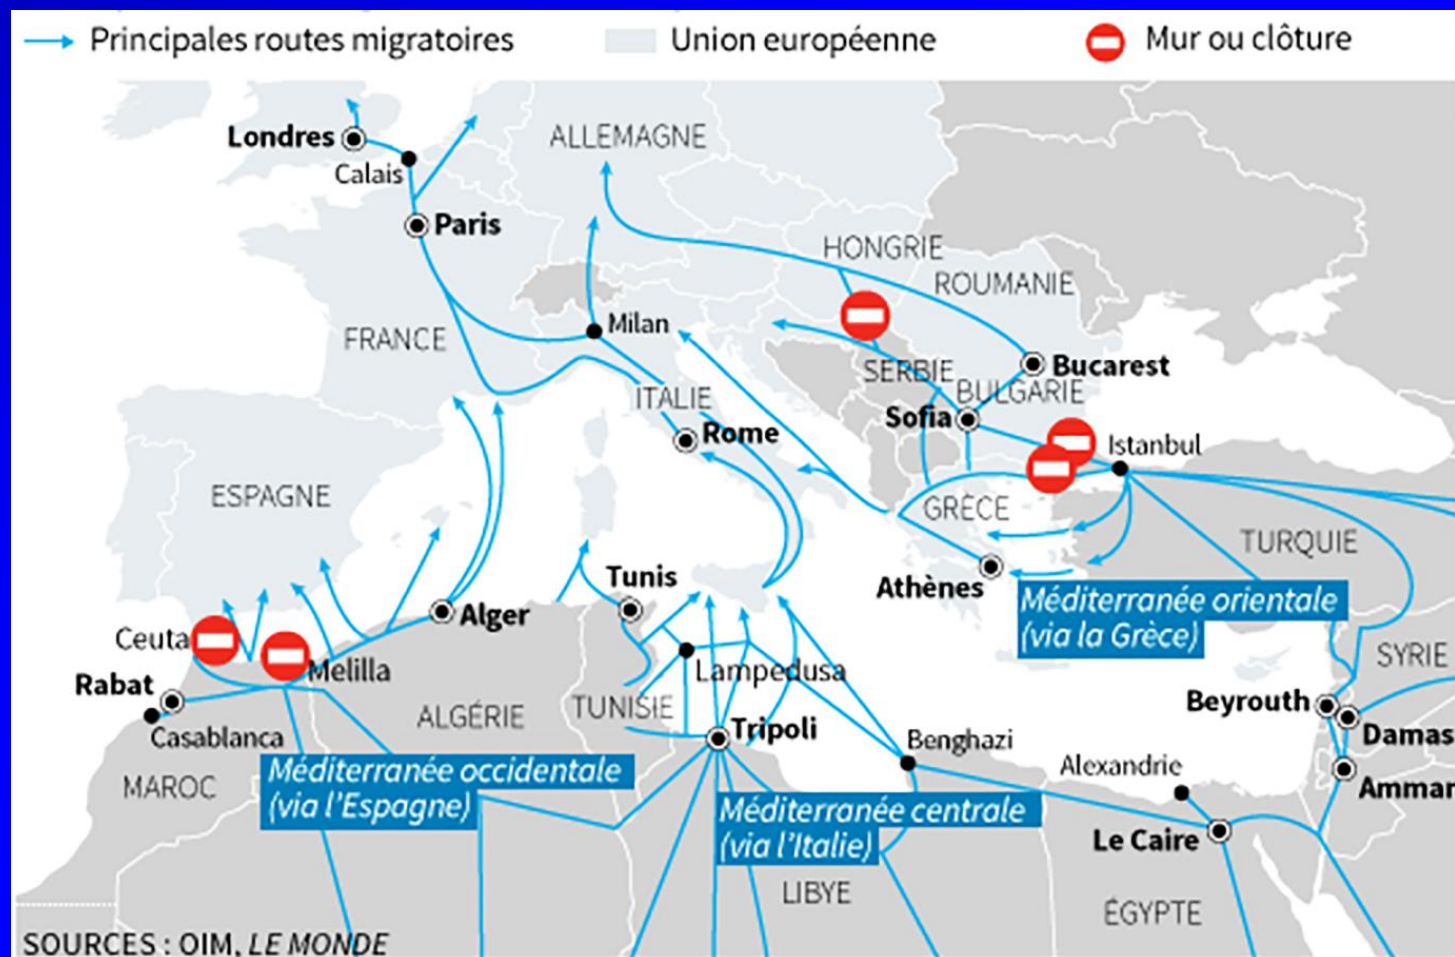

2 - economic decline

Les 17 pays de la zone euro

- € Pays dont la monnaie est l'euro
- Date d'entrée
- Autres pays membres de l'Union européenne

International immigration flows and foreigners

3/ CHINA: A DOMINANT PLAYER IN INTERNATIONAL TRADE

3.1/ A major emerging international power:

- A/ The world's largest population, but a demographic slowdown on a massive scale**
- B/ Record economic dynamism (the world's leading economic power at purchasing power parity)**
- C/ Colossal energy consumption, but a massive switch to new energies**

3. 2/ Giant companies still closely linked to the State, but more aggressive abroad:

- A/ Strong points: oil, construction, banking, electric cars, IT and telecommunications, modern weapons**
- B/ Rapidly emerging companies: steel, cement and aluminium, shipyards and electronics**

3.3/ Major challenges:

- A/ A highly unequal structure of national income**
- B/ Inflation (rising workers' wages, offshoring)**
- C/ Domestic debt**
- D/ Preserving a threatened environment, but spectacular progress**

4/ THE EUROPEAN UNION AND CHINA: PRIVILEGED TRADING PARTNERS OR INCREASINGLY HOSTILE COMPETITORS?

A/ Macro-economic vision: rapid growth, but unbalanced trade

- 1/ An increasingly unfavorable coverage ratio**
- 2/ Strong economic relations**

B/ Macro-economic vision: a “win-win” partnership?

- 1/ China's remarkable trade boom**
- 2/ The EU needs China**

C/ Micro-economic vision: the example of the industry

- 1/ Two major problems (global value chains, obstacles to setting up in China)**
- 2/ A case study: the automotive industry**

Conclusion (1)

Today, Europe faces formidable challenges

1 – Geostrategic:

A / Controlling immigration Frontex agreement with southern countries, particularly Morocco, Tunisia and Turkey;

B / Dealing with the consequences of more numerous wars that are costly in human and financial terms:

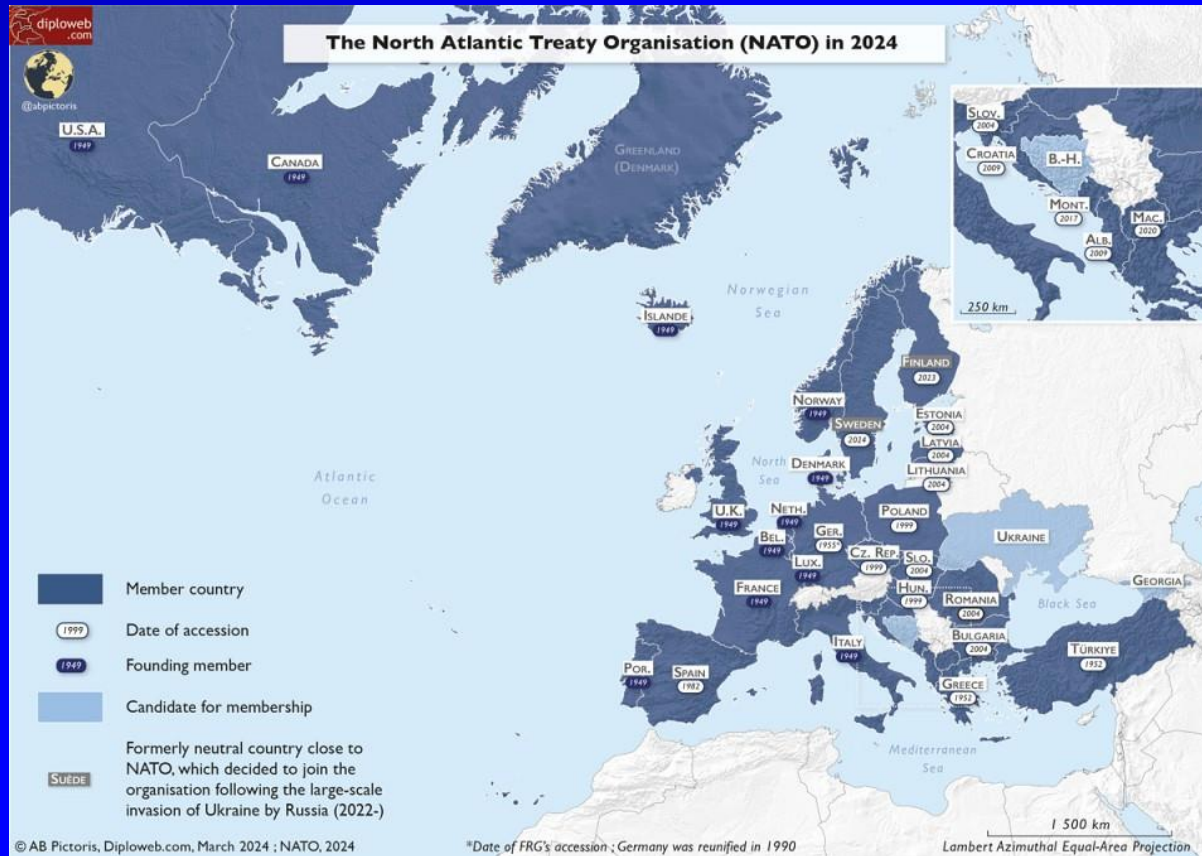

1) The war in Ukraine:

- strengthening of Atlantic solidarity, but called into question by the new American strategy (return to isolationism, greatly accelerated under Donald Trump);
- influx of new migrants;
- major agricultural crisis in Ukraine and Russia, particularly to the detriment of African countries;
- a long war of opposition mobilising massive quantities of weapons, hence the resistible rearmament of Europe;
- Divergences between Europeans (Poland and the Baltic States versus Hungary and Slovakia, and even Romania)

- Russian military control
- Claimed Russian control
- Limited Russian military control
- Russia annexed Crimea in 2014
- Limit of Ukrainian advance

Source: ISW (21:00 GMT, 24 June)

Conclusion (2)

2) Wars in the Near and Middle East:

- The wars in Syria, Lebanon, Yemen and Gaza;
- Influx of new migrants;
- a redistribution of power: the decline of Iran and the Shiites; the strengthening of the Gulf States and, above all, Turkey; the questioning of the Abraham Accords.

3) Changes in Africa:

- decline of European influence;- intensification of power rivalries (Russia, China, the United States, India, Brazil, Morocco and even Rwanda);
- - Rise of Islamism (particularly rivalry between Turkey and Saudi Arabia).
- C/ Increased international rivalries (Egypt/Ethiopia, India/Pakistan, Indian and Atlantic Oceans, Arctic and Antarctic, South China Sea, etc.)

Conclusion (3)

- 2/ Economic:
- A/ The new US trade strategy:
 - 1) Taxing exports to the United States to reduce the country's trade deficit (e.g. EU: +20 per cent with suspension until 1 August 2025 at a level of 10%);
 - 2) leading to negotiations between individual states: only certain countries can implement anti-US sanctions (e.g. China with rare earths).
- B/ The EU's loss of global competitiveness:
 - 1) the long-term consequence of insufficient research and development efforts compared to North America and the Far East;
 - 2) Many countries are overly indebted, particularly in Latin Europe
 - 3) Excessive increases in energy costs and energy prices (resistance to nuclear power, excessive dependence on foreign sources of new energy, the need to compensate for the loss of Russian gas, etc.)
 - 4) Excessively high labour costs (social security contributions, ageing population, labour shortages).
 - 5) Excessively restrictive regulations, particularly in the environmental field, and excessive exposure to the demands of activist minorities.
 - 6) Too slow technological change (artificial intelligence, robotics, car batteries, solar panels and wind turbines).

The Draghi report on EU competitiveness

Luxembourg 2024

Summary

- 1. The starting point:
 - a new landscape for Europe 11
 - Three transformations ahead for Europe 14
 - Towards a European response 17
 - Preserving social inclusion 19
- 2. Closing the innovation gap 23
 - Europe's productivity challenge 23
 - Key barriers to innovation in Europe 28
- 3. A joint decarbonisation
 - and competitiveness plan 39
 - The root cause of high energy prices. 43
 - The threat to Europe's clean tech sector. 46
 - The challenges of asymmetric decarbonisation . 48
 - A joint plan for decarbonisation
 - and competitiveness. 50
- 4. Increasing security and
 - reducing dependencies. 54
 - Reducing external vulnerabilities 56
 - Strengthening industrial capacity
 - for defence and space. 59
- 5. Financing investments 63
- 6. Strengthening governance 67

Conclusion (4)

3 – The challenges of sustainable development:

A/ Addressing the effects of climate change (natural disasters) and global warming (heat waves, water shortages, fires);

B/ Reducing the impact of pollution (greenhouse gases, plastics), particularly on health (fertilisers, lung diseases, heart disease and cancer) and developing the circular economy through recycling;

C/ Balancing population growth and generational renewal to avoid excessive ageing.

D/ to preserve biodiversity and natural landscapes
